CC ester linkage in a composition. Compositions engrising cellulase are compositions comprising glucose oxidase are useful for modulating the amount of cellulose in a composition. Composition. Composition. Composition comprising cellulase are camount of glucose ox oxygen in a composition. Compositions comprising the amount of glucose oxidase are useful for modulating the amount of myo-inositol phosphates cellulase are useful for modulating the amount of myo-inositol phosphates of in a composition. Composition. Compositions comprising beta-galactosidases are useful for modulating the amount of glyceride in a composition. Compositions comprising lipase are useful for modulating the amount of glyceride in a composition. Compositions comprising lipase are useful for modulating the amount of starches or maltodextrins in a composition compositions comprising comprising comprising glaba-samylases are useful for modulating the amount of starches or maltodextrins in a composition. Compositions comprising composition composition compositions comprising composition composition composition compositions comprising composition. The amount of night or low molecular weight composition acid chains in a composition. Compositions comprising composition acid chains in a composition. Compositions comprising composition acid chains in a composition. Compositions comprising composition compositions compositio phytase, beta-galactosidases, invertase, lipase, alpha-amylase, laccas polygalacturonase or xylanase. Compositions comprising the tannase are useful for modulating the amount of compounds that comprise a gallate The sequences given in ABQ80319-66 encode enzymatic proteins derived from A. fumigatus. The resulting proteins display the catalytic activity of an enzyme such as tannase, cellulase, glucose oxidase, glucosmylase, se oxidase, glucoamylase, lipase, alpha-amylase, laccase,

The sequence can be insert into the plasmid pQE60 to generate plasmid FERM P-16713 for expression e.g. E.coli. The xylanase is useful for the preparation of xylooligosaccharide from xylan and for pulp-bleaching. (Updated on 27-AUG-2003 to correct OS field.)

The sequence can be inserted into the plasmid pQE60 to generate plasmid FERM P-16713 for expression in e.g. E.coli. The xylanase is useful for the preparation of xylopligosaccharide from xylan and for pulp-bleaching. (Updated on 27-AUG-

The xylan enzyme has good heat stability, high activity under acidic and neutral pH. The xylan enzyme can be used as a feed additive and can be widely used in animal feed.

                                                                                                                                                                                                                                                                                                                                                                    also useful as query sequences to identified other family members or related sequences. Anti-(hemi)cellulase antibodies are useful for qualitative or quantitative determination of a polypeptide in a biological sample. These antibodies are also useful in diagnosing organism is infected with Aspergillus. The dough prepared by using the inventive (hemi)cellulase has increased strength, elasticity, stability, reduced stickiness, improved extensibility and machinability. The prepared baked product has improved crumb structure, softness and flavour. The (hemi)cellulase has higher specificity towards the substrate, is less antigenic and produces less undesirable side
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence encodes an A. niger (hemi)cellulase NBE021. The (hemi)cellulase coding sequences of the invention are derived from a filamentous fungus, preferably Aspergillus niger. The (hemi)cellulase is useful in producing dough, which is useful for preparing a baked product such as bread, biscuits from the dough. Fragments of the (hemi)cellulase DNA are useful as probes and primers for detecting the expression of (hemi)cellulose mRNA in a biological sample such as a tissue. They are

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       537
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       477
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    477
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   417
```

The invention describes an isolated or recombinant polypeptide having 50% or more identity to 190 300-1200 residue amino acid (S1), given in the specification, over a region of 100 or more and the polypeptide as thermostable xylanase activity. (I) is under the polypeptide of the constable of the constable of the constable to the constable of th

residues useful for: sequences

The polynucleotide (II) encoding (I) is useful for amplifying nucleic acid encoding a polypeptide having a xylanase activity which involves amplification of a template nucleic acid with a primer pair capable of amplifying (II) or its subsequence. (I) is useful for treating and preventing bacterial infection and fungal infection e.g. coccidiosis. This sequence encodes xylanase protein isolated from an environmental
            Aspergillus

It was isolated using a method for identifying a DNA fragment encoding a protein of interest. The method involves the direct screening of a cDNA library prepd. in bacterial (e.g. E. coli) transformed with DNA from a eukaryotic organism (e.g. A. niger) that produces the protein. Screening for xylanase-producing clones can be performed on agar plates containing oat spelt xylan and RBB-xylan. The method was utilised in the identification of CDNA clones (AAT63042-46) coding for A. niger cellulase, xylanase and arabinoxylan degrading enzymes (AAW14595-99). (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Identifying DNA fragments encoding proteins, e.g. for new enzyme discovery - by direct screening of a cDNA library in bacteria trawith DNA from eukaryotic organism producing the protein.

has been transformed with a vector encoding a protein having xylanase activity, where the protein comprises an amino acid sequence from a xylanolytic fragment of the amino acid sequence in AAY24480 or AAY24481. Also described is an enzyme preparation derived from the culture medium. The enzyme composition can be used in a method for biobleaching, modifying plant biomass properties, especially the reduction of lignin content in pulp and paper processing. The xylanases are hemicellulases which partially degrade the hemicellulose and enhance the extractability of lignins by conventional chemical bleaching of wood pulp. It can be used alone or as a supplement to other treatments that reduce lignin content of wood pulp, increase its drainability or decrease its water retention. The culture medium can be used directly without the need to
                                                                                                                                                                                                                                                                                                                            Fagerstrom R,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      purify the enzymes. Actinomadura flexuosa xylanases have a pH optimum and thermostability desirable for the biobleaching of wood pulp reducing the need to acidify the pulp prior to xylanase treatment. The xylanases partially degrade the hemicellulose in wood pulp which enhances the extractability of lignins by conventional bleaching chemicals and results in a lower consumption of bleaching chemicals reducing the formation of environmentally undesired organic compounds. The present sequence encodes actinomadura sp. DSM43186 35 kDa xylanase. N.B. This sequence is indexed from US5935836 which is a treat as basic specification for FI9503639. (Updated on 25-MaR-2003 to correct DR field.) (Updated on 16-OCT-2003 to standardise OS field)

/organism="Gibberella moniliformis" /mol type="mgNA" /strain="m3125" /db xref="taxon:117187" /clone="FVMB275" /tissue type="mycelia" /clone lib="FvM" /clone lib="FvM" /site 2: XhoI; anamorph: Fusarium verticillioIdes. Library site 2: XhoI; anamorph: Fusarium verticillioIdes. Library rom was prepared from pooled RNA obtained from a 48-hour and a 72 hour, liquid GYAM culture from strain M-3125. Cultures were vacuum filtered and the mycelial mats were frozen in liquid nitrogen, ground to a powder, and then added to TRIIOl Reagent (Invitrogen, Carlabad CA) at approximately 1 g mycelia per 10 ml TRIZol. The cDNA was	1860	USDA 1815 N. FyM was prepared from pooled RNA obtained from a 48-hour
and a 72 hour, liquid GYAM culture from strain M-3125.
Cultures were vacuum filtered and the mycelial mats were
frozen in liquid nitrogen, ground to a powder, and then
added to TRIzol Reagent (Invitrogen, Carlsbad CA) at
approximately 1 g mycelia per 10 ml TRIZOl. The CDNA was
directionally ligated into the plane Tript II SK(+) XR
vector (cDNA Synthesis Kit; Stratagene)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         vector (cDNA Synthesis Kit; Stratagene)

//notes "Vector: pBluescript II SK(+) XR; Site_1: EcoRI;
/notes "Vector: pBluescript II SK(+) XR; Site_1: EcoRI;
Site_2: XhoI; supplier: Pathogen-challenge series. Tubers
from pathogen-free Solanum tuberosum var. Shepody, clone
1756, were inoculated with 5 ul of Phytophthora infestans
(A2-mating type), through 2 puncture wounds 3 cm apart.
The tubers were incubated 1 minute to allow inoculum
absorption. The infection area was outlined for future
collection reference. Surface slices were sampled from the
tubers at 1 day, 5 days, 7 days, 11 days and 14 days
post-infection. All samples were pooled and used for RNA
isolation and library construction. A normalized library
was constructed following a modified protocol of Bonaldo
et al. (1996. Genome Research 6: 791-806)."

Surface slices were sampled from the tubers at 1 day, 5 days, 7 days, 11 days and 14 days post-infection. All samples were pooled and used for RNA isolation and library construction. A normalized library was constructed following a modified protocol of Bonaldo et al. (1996. Genome Research 6: 791-806)."

Library FvI was prepared from growth on excised maize seedling roots and shoots. The roots and shoots were prepared as described above and then inoculated by dipping briefly in a suspension of 5 x 10e6 conidia per ml. The inoculated roots and shoots were then incubated on moistened Whatman
                                                                                                                                                                                                                                                                                                                                                  #1 filter paper at room temperature under sterile conditions for 4 days. Fungal mycelial was collected, frozen in liquid nitrogen, ground to a powder, and then added to TRIZOl Reagent (Invitrogen, Carlsbad CA) at approximately 1 g mycelia per 10 ml TRIZOl. The cDNA was directionally ligated into the pBlueScript II SK(+) XR vector (cDNA Synthesis Kit; Stratagene)."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     #1 filter paper at room temperature under sterile conditions for 4 days. Fungal mycelial was collected, frozen in liquid nitrogen, ground to a powder, and then added to TRIzol Reagent (Invitrogen, Carlsbad CA) at approximately 1 g mycelia per 10 ml TRIzol. The cDNA was directionally ligated into the pBlueScript II SK(+) XR vector (cDNA Symthesis Kit; Stratagene)."

FvI was prepared from growth on excised maize seedling
roots and shoots. The roots and shoots were prepared as
described above and then inoculated by dipping briefly i

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               a suspension of 5 x 10e6 conidia per ml. The inoculated roots and shoots were then incubated on moistened Whatman #1 filter paper at room temperature under sterile conditions for 4 days. Fungal mycelial was collected, frozen in liquid nitrogen, ground to a powder, and then added to TRIzol Reagent (Invitrogen, Carisbad CA) at approximately 1 g mycelia per 10 ml TRIzol. The CDNA was directionally ligated into the pBlueScript II SK(+) XR vector (cDNA Synthesis Kit; Stratagene)."

Library FvI was prepared from growth on excised maize seedling roots and shoots for roots and shoots were prepared as described above and then inoculated by dipping briefly in a suspension of 5 x 10e6 conidia per ml. The inoculated roots and shoots were then incubated on moistened Whatman #1 filter paper at room temperature under sterile conditions for 4 days. Fungal mycelial was collected, frozen in liquid nitrogen, ground to a powder, and then added to TRIzol Reagent (Invitrogen, Carlsbad CA) at approximately 1 g mycelia per 10 ml TRIzol. The cDNA was directionally ligated into the pBlueScript II SK(+) XR vector (CDNA Synthesis Kit; Stratagene)."	USDA 1815 N. University St, Peoria, 1815 N.
